

In compliance with Illinois Public Act 099-0922, Cross Lutheran School has conducted lead testing on every water fountain, faucet, and sink in the facility! You will be pleased to know that none of them has exceeded the 5 parts per million level that would be problematic. We do, however, have two faucets in the kitchen that show minor lead levels (3.94 parts per million and 2.42 parts per million.) This issue is being addressed as directed by the State of Illinois. Thank you for your cooperation!
